As a Senior-Level Front-End Developer, most of my free time is spent researching new technologies, techniques, and standards to perfect my craft. Taking pride in a mentor-like position, I find it important to always have the most up-to-date knowledge on web development technologies. I often experiment with new ideas in code as a way to stay at the top of my field.

When I am NOT doing research or work, I tend to spend my extra time as a Godot Game Designer. For the last 10 years, my longest lasting hobby has been creating games.
